

RL Engineering adds Deepwave Digital to our line card.

RL Engineering is proud to announce the addition of Deepwave Digital to our line card. Deepwave Digital's solutions directly enables the incorporation of artificial intelligence (AI) in radio frequency (RF) and wireless systems by supplying customers an integrated hardware and software solution. Deepwave's technology moves the AI computation engine to the signal edge of the RF system to reduce network bandwidth, latency, and human-driven analysis requirements. More than a USRP, Deepwave's platforms include significant AI computational horsepower via an NVIDIA GPU and Deepwave's AI software engines.

Deepwave Digital is a dedicated team of RF industry experts with over fifty years of combined experience providing digital signal processing solutions to the commercial and defense industries. Deepwave understands both the technical capabilities and system limitations, leading them to develop novel hardware and software solutions to combine the fields of artificial intelligence and signal processing.

Contact your RL Engineering sales engineer if you'd like to learn more about Deepwave Digital's solutions.
